PLANTING INFO

Tall fescue in general should be seeded at 6 to 8 pounds per 1,000 sq. ft. or 350 pounds per acre. Cover seed with no more than .25 inches of soil, taking care to establish good seed to soil contact. If possible, roll the planting area. Keep seeds moist throughout the establishment period — 28 to 32 days after planting or when grass blades reach about 3 inches. Optimum mowing height is 2 inches, but it can be mown higher or lower based on your maintenance practices. Turf should be ready for use in about 6 to 8 weeks. Low to moderate fertility should be applied throughout the year; 2-3 pounds of NPK appropriate for your growing area should be adequate.

DISTRIBUTED BY:

TALL FESCUE

THE PRIDE OF NEW GENETICS!

DESCRIPTION

Tanzania is part of a bold new line of genetics. Fearless in the face of drought, standing strong against salty soils, Tanzania dares the seasoned athlete to give their best without backing down. Finely textured and providing dense turf, it will handsomely stand up to the most scrutinizing critic. Tanzania is ideal for use in athletic fields, airstrips, home lawns and commercial properties.

PERFORMANCE DATA

TURF QUALITY ('SCHEDULE B')

Turf quality ratings of tall fescue cultivars grown in twelve locations in the U.S. using 2007-11 data: 1-9, where 9 is ideal (LSD=0.3)

BULLSEYE	6.6
TANZANIA	6.4
REBEL IV	6.1
JUSTICE	6.0
KY31	3.6

FALL COLOR (DECEMBER)

Ratings of tall fescue cultivars NTEP 2007-11 data: 1-9, where 9 is ideal (LSD=0.9)

TANZANIA	6.4
FALCON IV	6.0
3RD MILLENNIUM SRP	5.9
MUSTANG	5.8
KY31	4.8

DROUGHT TOLERANCE

Drought tolerance (wilting) ratings of tall fescue cultivars NTEP 2007-11 data: 1-9, where 9 is ideal (LSD=1.5)

VAN GOGH	6.8
TANZANIA	6.7
FAITH	5.7
GAZELLE II	5.3
INTEGRITY	4.8

Seeding Rate: 12/in²

Production Phase

In Use

Tanzania is bred to offer many important turf traits, such as:

- OUTSTANDING DROUGHT TOLERANCE
- EXCELLENT TURF QUALITY
- FINE LEAF TEXTURE
- SUPERIOR RESISTANCE TO BROWN PATCH
- GREAT TURF DENSITY
